The Innovative Tool: Blockchain Technology

- Blockchain is a system of record that uses cryptography to secure data
- ***“An immutable digital ledger system implemented in a distributed fashion (i.e. without a central repository) and usually without a central authority”*** (US Department of Commerce)
- This definition highlights two key aspects of blockchain:
 - Information entered on a blockchain is immutable & cannot be altered (information can be added but existing information cannot be deleted)
 - Blockchain is a distributed system, does not have a single point of failure. Copies of blockchain are stored on all computers on the network, making the system extremely difficult to hack or destroy

KRCS Cash Transfer Programme

01

CSG meeting to introduce the project and review assessment data at the County level for Geographical targeting and development of targeting criteria.

02

Sub County review of targeted geographical areas, targeting criteria and coordination with local administration and community leaders

03

Community mobilization through local leaders and structures for sensitization on the new technology, household profiling, consenting and community based targeting and registration using KOBO platform

04

Training of KRCS team

05

Verification and validation of the beneficiary data by KRCS and the Community through MPESA test and community review meetings and handle complaints and feedback.

06

Cash transfers to the validated beneficiaries through MPESA mobile money transfer platform/mechanism

07

Encashment monitoring and complaints and feedback handling sessions with the community to ensure everyone received the entitled cash transfer.

08

Conduct cash Post Distribution Monitoring in the community.

09

Carry out review of the pilot through an After Action Review process.

Open Loop Cash Transfer: The Modular Approach
